

Replacing Hornby Dublo colour lights with LEDs

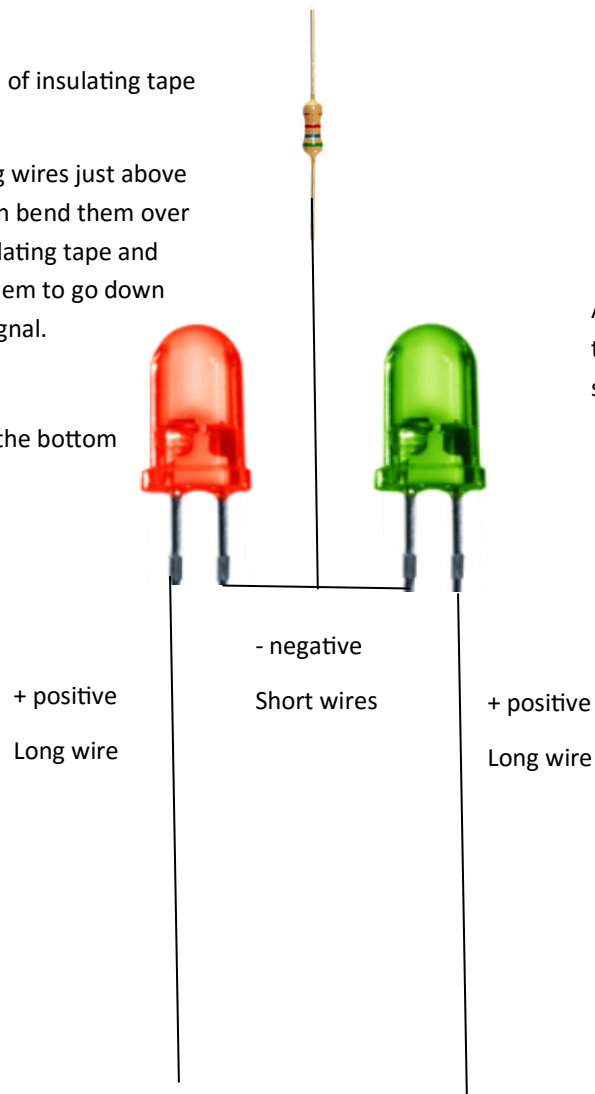

To replace the bulbs with LEDs

1. The short wires are bent round and threaded through the tapped hole in the signal head making sure they connect with the bare metal of the post
2. Put a small piece of insulating tape over the LEDs
3. Clip the LEDs long wires just above the flatten section bend them over on top of the insulating tape and solder wires to them to go down the post of the signal.

A resistor can then be soldered to the central tag in the base as shown here.

Red in the top Green in the bottom

The original back panel for the signal cannot be used so cover the back with black plastic insulating tape.as shown here.
